Technical Data Sheet

Properties:

AKEMI® Acid Cleaner free of hydrochloric acid is a cleaning concentrate on the basis of organic acids with non-ionic surfactants and auxiliary agents. The surfactants contained are in accordance with the presently valid laws governing surface-active substances and are biodegradable. The product is characterised by the following properties:

- free of hydrochloric acid
- no corrosive vapours
- very fast and high efficiency
- free of solvents
- low odour

Application Area:

AKEMI® Acid Cleaner free of hydrochloric acid is used for an initial or basic cleaning. It removes cement film and the remains of limestone and mortar as well as remains of plasticized, mineral joint mortar and films of stone care products from acid-resistant fine stoneware, clinker and ceramic surfaces and the like. It can be used indoors and outdoors.

Instructions for Use:

1. According to the degree of soiling, apply purely or dilute with cold water in a ratio of 1:20.
2. Allow to work for 5-15 minutes.
3. In case of stubborn dirt use a brush or a scrubber.
4. Then rinse thoroughly with clean water. To remove the water we recommend to use a wet/dry canister vacuum cleaner. Repeat process until all traces of Cement Film Remover have been removed.

Special Notes:

- Prepare a sample area to examine material consumption, appearance and efficiency.
- Do not use on slabs which are sensitive to acids, e.g. fine ground or polished limestone, marble or concrete ashlar, tiles, anodized aluminium or enamel. Ignoble metals s.a. iron, zinc, aluminium and the like may be corroded by the product. If in doubt, try at an inconspicuous area.
- Do not use together with hot water.
- Do not allow contact with plants, otherwise rinse immediately with plenty of water. Do not allow concentrated or diluted solution to gain access to cultivated land.
- For adequate waste disposal container must be completely emptied.

The protection gloves to be used have to comply with the specifications of the directive 89/686/EC and the directive derived decree EN374, respectively, e.g. the above listed protection glove type. The mentioned permeation times´ data were generated and verified with material samples of the recommended protection glove type in the scope of laboratory anylyses of the company KCL GmbH in compliance with EN374.
This recommendation refers exclusively to the material safety data sheet referenced product delivered by Akemi and the indicated field of application. In case of product dilution or in case of mixture with different substances or chemicals, and in condition of EN374 deviation the producer of CE-approved protection gloves must be contacted for detailed information (e.g., KCL GmbH, Germany, 36124 Eichenzell, internet: http://www.kcl.de).

Protective gloves

The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture.
Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

· Material of gloves
Butyl rubber, BR
Fluorocarbon rubber (Viton)
Nitrile rubber, NBR
Chloroprene rubber, CR
Neoprene gloves
The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

· Penetration time of glove material
Value for the permeation: Level ≤ 6, 480 min
The exact break trough time has to be found out by the manufacturer of the protective gloves and has to be observed.

· For the permanent contact gloves made of the following materials are suitable:
Butyl rubber, BR
Butoject (KCL, Art_No. 897, 898)
Nitrile rubber, NBR
Camatril (KCL, Art_No. 730, 731, 732, 733)
Fluorocarbon rubber (Viton)
Vitoject (KCL, Art_No. 890)
Chloroprene rubber, CR
Camapren (KCL, Art_No. 720, 722, 726)
Neoprene gloves
Nitopren (KCL, Art_No. 717)

· As protection from splashes gloves made of the following materials are suitable:
Nitrile rubber, NBR
Camatril (KCL, 730, 731, 732, 733)
Chloroprene rubber, CR
